

PRODUCT SUMMARY

Name of product:

LifeTrack

URL:

<http://34.83.218.226/>

Itemize List of all major committed functions:

- User Registration and Login
 - The system shall allow users to register with an email, username, and password, and log in using valid credentials with JWT authentication.
- Resource Search
 - The system shall allow users to search for resources by keyword (up to 40 alphanumeric characters) and filter by category (Academic, Career, Wellness, Productivity).
- Search Results Display
 - The system shall display matching resources as cards with images, titles, descriptions, and category tags on the results page.
- Personal Dashboard
 - The system shall display a personalized dashboard showing the user's upcoming milestones, today's schedule, and a wellness snapshot upon login.
- Goal and Milestone Management
 - The system shall allow logged-in users to create, update, and delete goals and milestones with titles, descriptions, categories, and target dates.
- Profile Management
 - The system shall allow users to view and edit their profile information, including name, university, major, academic year, and profile photo.
- Wellness Check-In
 - The system shall allow users to log their daily mood, stress level, and completed wellness habits, and view their check-in history.
- Admin User Management
 - The system shall provide administrators with a dashboard to view all registered users and their account status, email, username, and role
- Campus Map
 - The system shall display an interactive Google Maps view of SFSU campus resource locations filterable by category (Wellness, Academic, Career, Productivity) with directions support.
- Google Analytics Integration
 - The system shall track and report user activity and page visits across all pages using Google Analytics.
- Accessibility Settings
 - The system shall allow users to toggle between default dark mode and high contrast light mode that applies across all pages of the application.
- Password Reset
 - The system shall allow users to reset their passwords by verifying their identities through security questions
