

Milestone 3 Review Summary

TEAM 01

CSC 648-848 Spring 2026 Sec 02

April 7, 2026

1. Summary of Feedback and Tasks

The following feedback was received from the professor following the Milestone 4 vertical prototype demo:

1. Expand what is being used and make sure it aligns with the project requirements.
2. Clarify the logic for the search algorithm and database, specifically which tables and fields are being queried (title, description, category).
3. Bring in a working login with more realistic built-in data. More than 50% of P1 requirements must be implemented and functional.
4. Result pages need improved UI. Dashboard needs to be connected, not static, and must integrate with other components.
5. Show the database tables and demonstrate real data inside them during the demo.
6. Dashboard currently has only a few data items. Clarify how the dashboard will interact with other components (academic, wellness, goals, etc.).
7. Clarify how the team is collaborating and dividing work.
8. More than 10 P1 items must be completed. The professor will ask which P1 items are done in the upcoming milestones. Use numbered lists instead of bullet points for P1 features.

2. List of Tasks the Team Chose to Focus On

Backend & Security:

- Implement JWT authentication with access and refresh tokens
- Implement password reset flow using security questions
- Add search input validation (40 alphanumeric character limit)
- Add file upload validation (JPEG, PNG, WebP, 5MB max)
- Confirm bcrypt password hashing is implemented and working

Dashboard & Core Pages:

- Connect the dashboard to backend data (milestones, wellness, academic progress)
- Build and connect the Profile page (edit info, upload photo, accessibility toggle)
- Implement logout functionality across all pages
- Build Admin Dashboard to view all registered users and account status

- Build Career page frontend with Resume Builder, Portfolio Checklist, and Interview Prep

Features & UI:

- Add interactive Campus Map with Google Maps and category filters
- Integrate Google Analytics across all pages
- Replace placeholder resource thumbnails with real Unsplash images
- Build Study Guide Workflow and Breathing Reset Guide static resource pages
- Add shared header profile image loader across all dashboard pages
- Add Privacy Policy page linked in landing page and dashboard footer
- Improve search results page UI

3. List of P1 Functions Agreed at the Meeting

1. User Registration and Login
 - a. The system shall allow users to register with an email, username, and password, and log in using valid credentials with JWT authentication.
2. Resource Search
 - a. The system shall allow users to search for resources by keyword (up to 40 alphanumeric characters) and filter by category (Academic, Career, Wellness, Productivity).
3. Search Results Display
 - a. The system shall display matching resources as cards with images, titles, descriptions, and category tags on the results page.
4. Personal Dashboard
 - a. The system shall display a personalized dashboard showing the user's upcoming milestones, today's schedule, and a wellness snapshot upon login.
5. Goal and Milestone Management
 - a. The system shall allow logged-in users to create, update, and delete goals and milestones with titles, descriptions, categories, and target dates.
6. Profile Management
 - a. The system shall allow users to view and edit their profile information, including name, university, major, academic year, and profile photo.
7. Wellness Check-In
 - a. The system shall allow users to log their daily mood, stress level, and completed wellness habits, and view their check-in history.
8. Admin User Management
 - a. The system shall provide administrators with a dashboard to view all registered users and their account status, email, username, and role.
9. Campus Map
 - a. The system shall display an interactive Google Maps view of SFSU campus resource locations filterable by category (Wellness, Academic, Career, Productivity) with directions support.
10. Google Analytics Integration

- a. The system shall track and report user activity and page visits across all pages using Google Analytics.
- 11. Accessibility Settings
 - a. The system shall allow users to toggle between default dark mode and high contrast light mode that applies across all pages of the application.
- 12. Password Reset
 - a. The system shall allow users to reset their passwords by verifying their identities through security questions.
