Hi everyone,

Here's a summary of my contributions to the project as a Frontend Engineer,

Milestone 0:

I created my personal About Me page for the team website and got familiar with the project setup, repository structure, and overall workflow.

Milestone 1:

I worked on Competitive Analysis, where I created the comparison table between LifeTrack and tools like Notion, Todoist, Google Calendar, and Trello. This helped highlight how LifeTrack stands out as a unified platform designed specifically for college students.

Milestone 2:

I worked on the UI Mockups & Storyboards for the Job Preparation and Mental Wellness use cases. I helped define key user flows such as tracking job applications and navigating the wellness check-in and resource features. These storyboards helped guide how the Career and Wellness pages were later built.

Milestone 3:

I built several horizontal prototype pages, including Goal Management, Academic Management, Wellness, and Admin Dashboard. I focused on creating consistent layouts, adding dummy data interactions, and making sure the pages were responsive and visually complete for the prototype.

Milestone 4:

I built and improved multiple resource pages, including Resume Starter Template, Portfolio Checklist, Interview Prep Workflow, and Focus Tips. I fixed routing and file path issues and connected these pages to the appropriate sections. I also converted the resume page into a fillable resume builder with print/download functionality.

Milestone 5:

I built and finalized some of the resource pages and connected them properly to the rest of the app. I updated the Career page to fully support career goals, including add, edit, delete, and status filtering with summary cards and tabs. I also updated the Wellness Check-in to match backend requirements, added a mood slider synced with the existing UI, and connected recent check-ins to the API. In addition, I built the Sleep Routine page and connected it to backend endpoints for managing sleep habits.

Commits/PRs:

Good afternoon team,

Throughout this project I contributed as a Backend Engineer. The following are my contributions for each milestone:

- Milestone 0: Created my 'about page' (alex.html).
- Milestone 1: Completed the Personas and Main Use Cases section.
- Milestone 2: Created Class Diagram, Component Diagram, and Deployment Diagram for High-Level Diagrams section.
- Milestone 3: Backend for the dashboard and profile image upload. This included:
 - File type & size generation
 - Profile image upload route
 - Saving image URLs to database
 - Thumbnail generation
 - User Dashboard API support
- Milestone 4: Backend for user accessibility settings and security endpoints. This included:
 - Accessibility settings support
 - Security questions retrieval
 - Security questions update support
- Milestone 5: Backend for admin endpoints, career endpoints, dashboard compatibility fixes, and some resource endpoints. This included:
 - Admin role protection middleware
 - Admin stats/user support
 - Career goals endpoints
 - Dashboard wellness snapshot support
 - Resume resource support
 - Sleep Routine resource support
 - Wellness Check-In resource support
- Submissions to project development:
 - Commits: 47
 - Pull Requests: 14

Best regards,
Alex Hernandez

For this project, I acted as the Lead Back End Engineer. Below are the contributions I have made to the project:

1. Milestone 0:
 - a. Personal 'About Me' page
 - b. server.js + routes
2. Milestone 1:
 - a. Non-functional requirements
 - b. Half of the functional requirements
3. Milestone 2:
 - a. Revision of the functional requirements
 - b. Search function for vertical prototype
4. Milestone 3:
 - a. Auth endpoints
 - i. Account Register
 - ii. Account Login/Logout
 - iii. User authentication through access and refresh tokens
5. Milestone 4:
 - a. Academic endpoints
 - i. Assignment support
 - ii. Tasks support
 - iii. Study Sessions support
 - iv. Academic stats
 - b. Goals/Productivity endpoints
 - c. Wellness endpoints
 - i. Habits
 - ii. Mood check-in
 - d. Password change/reset
6. Milestone 5:
 - a. Project Planner resource
 - b. Weekly Planner resource
 - c. Courses + Course card support

Hello team,

For this project, I worked as the **Database Engineer** and contributed both technical work and teamwork support throughout the milestones.

My main contributions included:

- Set up the project server, installed the required dependencies, and helped get everyone connected to the shared server environment.
- Helped create about half of the initial functional requirements and early project documentation.
- Completed the database-related documentation for milestones that required database planning, schema details, or implementation explanation.
- Brainstormed, designed, and created the database structure, including the main tables, columns, relationships, and sample rows needed for the project.
- Helped test the server and database connections to make sure the application worked correctly.
- Tested the website thoroughly, including QA testing, double-checking the main features, reviewing the UI, and making sure the site worked properly from a user perspective.
- Supported teammates whenever they needed help by answering questions, troubleshooting issues, and helping them understand database or server-related parts of the project.
- Helped with front-end tasks when needed, including smaller UI and page-related fixes to support the rest of the team.

In total, I made **17 GitHub submissions/commits** to the team development branch thus far.

Overall, my role focused on building and maintaining the database side of the project, supporting server setup, helping with documentation, testing the website, and assisting teammates across both backend and frontend work.

Best,
Mohit

Will Brust - FRONT END ENGINEER

The following is my approximate contribution to this project as Lead Front End Engineer, which will take place in two sections; what I did in each milestone and my total commits and PR's over everything.

Milestones:

Milestone 0: Created the landing page (index.html), about page (about.html), styles.css and my personal page (willbrust.html).

Milestone 1: created storyboard UI diagrams for half of our usage scenarios using Figma.

Milestone 2: Created the VP search and search results (test_home.html, test_results.html and the front end JS file that supported these.)

Milestone 3: Created login, registration, dashboard, and migrated the VP into the search and search results pages, along with all front end JS files associated with these.

Milestone 4: overhauled our landing page, created a learn more page attached to the landing page, created a profile page and admin supported dashboard.

Milestone 5: added password reset to login, updated Academic, Productivity and Wellness to work with backend logic, admin profile page, accessibility settings, weekly planner (resource), project planning template (resource), and updated the dashboard to present snapshots of respective feature areas.

Commits/PR:

The total number of commits I made since we began this project is 41, and the total number of PRs are 25.

TEAM LEAD:

Number of submissions to the dev branch: 26

Milestone 0:

- Proposed idea for tech stack
- Got everyone's information and understanding of skills
- Coordinated tasks for each time of engineers
- Scheduled internal deadlines
- Confirmed tech stack was working
- Confirmed everyone was on track
- Sent out milestone 0 email to prof
- Created team page

Milestone 1:

- Wrote exec summary for document
- Quality checked document
- Submitted milestone 1 to repo and sent email to prof
- Assigned editor and worked with editor

Milestone 2:

- Coordinated and assigned tasks for document and Vertical Prototype
- Wrote key risks for project and project management
- Checked everyone's work
- Created document
- Assigned deadlines
- Verified everything is correct on document and vertical prototype
- Sent out messages for needed adjustments
- Checked progress and sent out reminders/ deadlines
- Submitted to repo and emailed prof

Milestone 3:

- Coordinated and assigned tasks for each member
- Set internal deadlines
- Prepared documents for meeting and email

Milestone 3:

Coordinated and assigned tasks for each member

Set internal deadlines

Prepared documents for meeting and email

<https://outlook.officeapps.microsoft.com/mail/sentitems/6d/AAQkAGU2NTgwMjdnLWRINGYtNGYyOC1hMWVlLWQ2MDUzMTReNzIzZgAQAL%3BmAzgNXI1pOjpT9...> 1/2

Sent Items - Khaterina Sengchanee - Outlook

Written M3 summary

Prepared for demo and assigned roles for demo

Verified horizontal prototype is aligned with instructions/requirements

Took notes on feedback

Emailed prof and grader our appendix and all of our copies of screens

Milestone 4:

Coordinated and assigned tasks for each member

Set internal deadlines

Added non functional requirements

Added profile picture API

Added accessibility to pages

Added privacy policy

Added campus map

Added more missing non functional reqs

Wrote product summary and usability test and self check

Submitted milestone 4 doc to repo and emailed professor

Milestone 5:

Coordinated and assigned tasks for each member

Set internal deadlines

Added non-functional requirements

M5 documentations

Verifying and confirming everything is finished

Preparing for demo

Writing use cases

Fixing

Number of submissions to the dev branch: 26
